

ABSTRACT OF DISCLOSURE

A main body the image forming apparatus comprises
a swinging member which swings freely with respect to the
5 main body. The swinging member is provided with a feeding
member for transporting a medium which is fed from a medium
feed section rotatably supported by the swinging member.
When swinging the swinging member, the user can access the
medium feed section for removing the jammed medium. The
10 feeding member is not deteriorated over ages. It is easy
to take out a belt unit for transporting the medium when
the swinging member is opened.
